

Trailer-Mounted Twin Pump Units

Precise uses triplex pumps mounted in a back to back configuration. Available pumps are SPM, GD, SWIOL and Kandle.

Trailer: Heavy beam drop deck design. Drop deck allows engine position to distribute unit weight as equal as possible to drive and trailer axles. Drop deck also lowers the center of gravity allowing for safer transportation of equipment.

Plumbing System: Precise builds any configuration of plumbing system our customers desire. We can incorporate flange, Victaulic or any other type of quick coupling you may desire. Stainless Steel, carbon steel any desired material may be used. Data Acquisition system available upon request.

Control Panel: System flow schematic incorporated into control panel for ease of operation. Standard engine transmission controls. Double redundant hydraulic system selected by operating a single switch. Rate, pressure and speed indication gauges via analog and/or digital displays.

Training/Commission of unit to be conducted at customer location.
